IDENTIFYING ALLERGIC REACTIONS IN KIDS

Mild symptoms: itchiness, skin redness, mild swelling, stuffy or runny nose, sneezing, watery or itchy eyes, hives

Severe symptoms: swelling of the mouth or tongue, difficulty swallowing or speaking, wheezing or difficulty breathing, abdominal pain, nausea or vomiting, diarrhea, dizziness, fainting.

If you suspect a child is having an allergic reaction, carefully monitor the progression of their symptoms. Severe allergic reactions can quickly become life threatening.

If the child experiences severe symptoms, call 911.

IF YOU SUSPECT A CHILD IS HAVING AN ALLERGIC REACTION, CAREFULLY MONITOR THE PROGRESSION OF THEIR SYMPTOMS. SEVERE ALLERGIC REACTIONS CAN QUICKLY BECOME LIFE THREATENING.

MILD SYMPTOMS: itchiness, skin redness, mild swelling, stuffy or runny nose, sneezing, watery or itchy eyes, hives

SEVERE SYMPTOMS: swelling of the mouth or tongue, difficulty swallowing or speaking, wheezing or difficulty breathing, abdominal pain, nausea or vomiting, diarrhea, dizziness, fainting.
