## **Immediate Corrective Action for Food Service Managers**

Food service is a busy, fast-paced environment. It is essential that <u>even during the busiest times food</u> <u>safety is a priority</u> for management staff and all employees.

Sometimes, however, things don't go as planned and your restaurant may face a dilemma on how to deal with a food safety problem. **Don't ignore the problem.** Fix it immediately by applying one of these Corrective Actions. Eliminating the problem minimizes the risk of someone getting a foodborne illness.

So stay busy-- and stay smart-- with the following tips.

| CDC Risk Factor          | Problem                                 | This is what you should do            |
|--------------------------|---|---------------------------------------|
|                          |   | (in order)                            |
| Employee Hygiene         | Handwashing                             | -Instruct employee to wash hands      |
|                          | Food employee does not wash             | immediately                           |
|                          | hands at appropriate time or does       | -Educate on where, when, and how      |
|                          | not do it correctly                     | to wash hands                         |
| Employee Hygiene         | Bare Hand Contact with Ready            | -Discard food if it was touched       |
|                          | to Eat (RTE) Food                       | -Educate employee about handling      |
|                          |   | RTE food with gloves, utensils, etc.  |
| Safe Food Source         | Approved Food Source/                   | Discard/Reject/Return food to         |
|                          | Condition                               | supplier                              |
|                          | Shipment is received from an            |                                       |
|                          | unapproved source or food is in         |                                       |
|                          | unsound condition                       |                                       |
| Safe Food Source         | Food Received at the Correct            | Discard/Reject/Return food to         |
|                          | Temperature                             | supplier                              |
|                          | -Cold foods received above 41°F         |                                       |
|                          | -Food labeled frozen is thawed          |                                       |
| Safe Food Source         | Freezing to Control Parasites           | -Freeze immediately (-4°F for 7 days  |
|                          | No written documentation of             | or -31°F for 15 hrs.) OR discard or   |
|                          | parasite destruction for fish           | cook                                  |
|                          | intended for raw or undercooked         | -Obtain documentation from            |
|                          | consumption                             | supplier                              |
| <b>Contaminated Food</b> | Food separation and protection          | Immediately relocate food items to    |
| & Equipment              | Raw animal foods stored                 | minimize risk in the following order: |
|                          | improperly with RTE foods or            | RTE foods on top/Fish, eggs,          |
|                          | with other raw animal products          | pork/ Ground meat/Poultry             |
| Contaminated Food        | Food Contact Surfaces Cleaned           | -Discard food that has come in        |
| & Equipment              | and Sanitized                           | contact with surface                  |
|                          | -Dishwasher chlorine levels are         | -Clean and sanitize surfaces          |
|                          | not at adequate strength                | -Set-up the 3-compartment sink to     |
|                          | -Food contact surfaces are visibly      | wash, rinse, and sanitize dishes and  |
|                          | soiled during use <u>or</u> hasn't been | utensils                              |
|                          | cleaned in between raw and RTE          |                                       |
|                          | foods <u>or</u> in the last 4 hours     |                                       |
